the surface of the first layer; and

MARKED UP COPY OF THE CURRENT CLAIMS

- (Twice Amended) A layered low dielectric constant nanoporous material comprising:
 a first layer [juxtaposing] on the surface of a substrate;
 a second layer that [is nanoporous] comprises a nanoporous material and [juxtaposing] on
 - [an] a first additional layer at least partially [juxtaposing] on the surface of the second layer, wherein the structural strength of the layered material increases by at least 100%.
- 2. The material of claim 1, wherein the low dielectric constant material has a dielectric constant no more than 2.5.
- 3. The material of claim 1, wherein the first layer substantially comprises a nanoporous material.
- 4. The material of claim 8, wherein the polymer is organic.
- 5. The material of claim 4, wherein the polymer comprises polyarylene ether.
- 8. (Twice Amended) The material of claim 3, wherein the <u>first layer</u> nanoporous material comprises a polymer.
- 10. The material of claim 1, wherein the second layer substantially comprises a nanoporous polymer.
- 11. The material of claim 10, wherein the polymer comprises at least one of a polyarylene ether or an adamantane-based compound.
- 12. The material of claim 1, wherein the additional layer comprises an organic compound.
- 13. The material of claim 12, wherein the organic compound substantially comprises at least one of a polyarylene ether or an adamantane-based compound.
- 14. The material of claim 1, wherein the nanoporous material comprises voids having a mean diameter of less than 100 nanometers.
- 15. The material of claim 1, further comprising a layer of metal wire between the substrate

and the first layer.

- 17. The material of claim 15, wherein the metal wire is aluminum or copper.
- 34. (Amended) The material of claim 3, wherein the nanoporous material of at least one of the first layer or the second layer comprises an adamantane-based compound.
- 35. (Added) The material of claim 3, wherein the nanoporous material of the first layer comprises a first material and the nanoporous material of the second layer comprises a second material.
- 36. (Added) The material of claim 35, wherein the first material and the second material each comprise a polymer.
- 37. (Added) The material of claim 35, wherein the first material and the second material each comprise the same polymer.
- 38. (Added) The material of claim 37, wherein the polymer is an organic polymer.
- 39. (Added) The material of claim 37, wherein the polymer is an inorganic polymer.
- 40. (Added) The material of claim 36, wherein the first material comprises an organic polymer and the second material comprises an inorganic polymer.
- 41. (Added) The material of claim 36, wherein the first material comprises an inorganic polymer and the second material comprises an organic polymer.
- 42. (Added) The layered material of claim 1, further comprising at least one second additional layer of material coupled to the first additional layer.
- 43. (Added) The layered material of claim 1, wherein the structural strength increases by at least 200%.

MARKED UP COPY OF THE SPECIFICATION

Detailed Description

In **Figures 1 and 2**, described in greater detail below, a layered stack 100 includes a substrate 110, a first layer 120, a second nanoporous layer 130, and an additional layer 140. In preferred embodiments, the first layer 120 in layered stack 100 includes either a continuous layer of non-volatile component 128 (**Figure 1**) or voids 125 and a non-volatile component 128 (**Figure 2**). The second layer 130 in layered stack 100 includes voids 135 and non-volatile component 138. The additional layer 140 in layered stack 100 may include voids 145 and non-volatile component 148. Volatile components 126 and 146 are not shown in the Figures.
